The Origin of Species

Charles Darwin published On the Origin of Species in 1859. The book introduced the theory of natural selection a

Natural selection is the process by which organisms better adapted to their environment tend to survive and proc

Key Principles of Natural Selection

The key principles of natural selection include:
1. Variation exists within populations of organisms.
2. Organisms produce offspring that can survive and reproduce.
3. Resources are limited, leading to competition.
4. Offspring with favorable traits are more likely to survive and reproduce.

Darwin Finches and the HMS Beagle

Darwin finches, also known as the Galapagos finches, provided crucial evidence for evolution. These 13 species

The HMS Beagle departed from England on December 27, 1831. The voyage lasted five years. Darwin collected
